

Harishwa S

First-Year B.E. Computer Science & Engineering Student

KPR Institute of Engineering and Technology, Coimbatore

+91 93843 92613 harishwa.tech2008@gmail.com linkedin.com/in/harishwa-s-048762432

Salem, Tamil Nadu

First-year Computer Science and Engineering student with a strong academic record and a working knowledge of Python programming and AI tools. Interested in software development, web development and embedded prototyping, with hands-on experience building an Arduino-based safety project and representing a farmer-to-consumer platform concept at Smart India Hackathon. Comfortable leading small teams and learning new technologies quickly.

Technical Skills

- Python Programming — good working knowledge
- AI Tools & AI-assisted development
- Web Development — basics
- Arduino & Electronics — basics
- Project development & prototyping
- Problem solving

Strengths

- Leadership
- Problem solving
- Teamwork & communication
- Creativity & initiative
- Quick learning & adaptability
- Technical curiosity

Clubs & Activities

- Member — Ignitron Club, KPRIET
- Participant — college technical & innovation activities

Sports & Extracurricular

- Kho Kho — school sports team member
- Participant — school sports activities
- Participant — school extracurriculars up to Class X

Languages

- Tamil — native
- English — good

Education

B.E. Computer Science and Engineering
KPR Institute of Engineering and Technology, Coimbatore | 2026–2030, First Year

Class XII — State Board
Sree Saravana Nikethan Higher Secondary School | 2026 | 553/600 — 92.17%

Class X
Sri Nachiyar Matriculation School | 2024 | 483/500 — 96.6%

Project

Anti-Sleep Alarm System for Drivers — College project, Arduino

- Built an embedded prototype that detects driver drowsiness by monitoring eye blinking through an eye-blink sensor.
- Programmed the Arduino to trigger a buzzer alarm when prolonged eye closure indicates drowsiness, alerting the driver to stay awake.
- Assembled the circuit using an Arduino board, eye-blink sensor, buzzer, battery and connecting wires.
- Gained practical exposure to sensor interfacing, microcontroller logic and automated alert systems; the system alerts the driver and does not control the vehicle.

Smart India Hackathon (SIH)

PROJECT IDEA · SIH EXPOSURE

FarmConnect — Farmer-to-Consumer Platform

- Proposed a platform concept connecting consumers directly with farmers, removing extra layers between producer and buyer.
- Planned the catalogue to cover a wide range of farm produce — vegetables, milk, curd, eggs, rice, pulses and other farmer-sourced products.
- Designed a distribution model built on local hubs and collection points to help deliver fresh products to consumers.
- Worked on problem identification around farmer income, freshness and distribution as part of SIH idea development.

Certification

Python Programming — 40 Hours
CUBE Technologies | Completed January 2026
Certificate of completion; training conducted at Sree Saravana Nikethan Matric. Hr. Sec. School, Nerinjipettai

Areas of Interest

Artificial Intelligence · Python Programming · Web Development · Software Development · Emerging Technologies · Innovation & Problem Solving
